Dynasty Begins Drilling at 100%-Owned Thundercloud, Ontario

VANCOUVER, British Columbia, July 7, 2026 -- Dynasty Gold Corp. (TSX.V: DYG) (FSE: D5G1) (OTC: DGDCF) ("Dynasty" or the "Company") is pleased to announce that the Company has commenced its 2026 Phase 1 drilling at its 100% owned Thundercloud property, located 47 km southeast of Dryden, Ontario.

The drilling rig has been moved to the South Pelham target, where Drill-hole TC24-06, drilled on the boundary of the Induced Polarization (IP) chargeability anomaly, discovered mineralization six meters from the surface, returning 0.8 g/t over 22.5m. Two nearby follow-up holes drilled in 2025 also intersected near-surface mineralization. Current drilling is being conducted in a southerly direction, targeting a mineralized extension to that found in the Pelham Zone, where a number of high-grade drill results were obtained by Dynasty (Refer to **Table 1** and **Figure 1**).

Table 1: *High-grade drill holes from Dynasty's 2022 to 2024 drill programs.*

Hole ID	From (m)	To (m)	Interval (m)	G/T Au
DP22-02	189	223.5	34.5	6.0
DP22-03	88.5	162.0	73.5	8.9
DP23-03	139.5	154.3	14.8	7.1
DP23-04	109.5	121.5	12.0	11.0
DP23-10	33.0	196.5	163.5	1.0
TC24-02	45.0	139.5	94.5	1.6

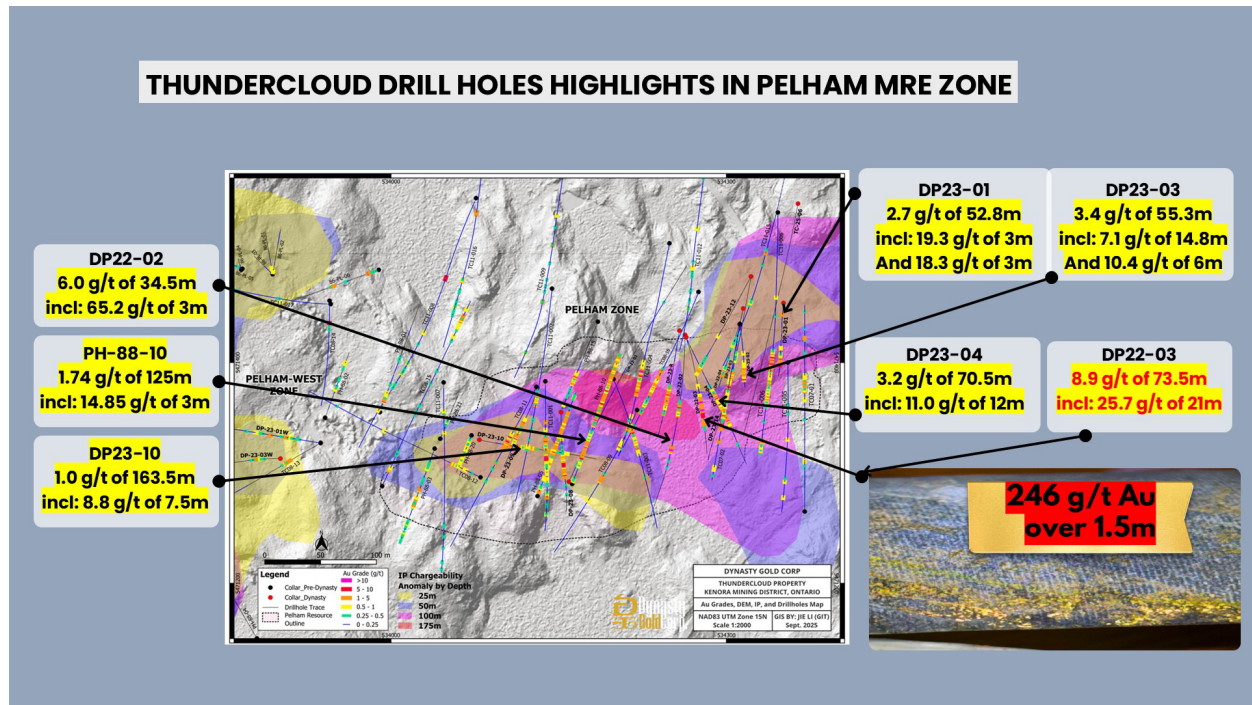

Figure 1: High-grade drill holes highlights in Pelham Zone.

After completing test drilling in the South-Pelham chargeability anomaly, the drill will be moved to the Pelham Main Zone to test for high-grade gold feeder zones and possible down-dip extensions of the northeast-plunging higher-grade shoots (modeled using Seequent’s Leapfrog software; see **Figure 2**), with the goal of increasing the existing NI 43-101 open-pit gold resource (refer to “About Dynasty Gold Corp.” section).

The objective of this year's program is to discover additional mineralization along the north-south corridor in the central parts of the property and to increase the resource in the Pelham Zone.
